

Mole, molecule, atom, molarity, mass and volume problems

CLASS NOTES

1. Finding quantity of moles (mol)

a- Use mole formula: $n=m/m_m$	b- Set up as ratio
<p>How many moles are in 20.0 g of HCl?</p> $n = \frac{m}{m_m} = \frac{20.0g}{36.46g/mol} = 0.549 \text{ mol}$	<p>How many moles of HCl are in 750 mL of a 4.3 M solution?</p> $n = C \times V = 4.3 \text{ mol/L} \times 0.75 \text{ L} = 3.2 \text{ mol}$

$$\begin{array}{r} 1.01 \\ 35.45 \\ \hline 36.46 \end{array}$$

$\div 1000$

2. Finding the molecule (molecule)

<p>1- Use mole formula: $n=m/m_m$</p> <p>2- Use molecule ratio (6.02×10^{23})</p> <p>How many molecules are in 5.00 g of H_2SO_4?</p>	<p>* use avogadro's #</p>
$n = \frac{m}{m_m} = \frac{5.00g}{98.09g/mol} = 0.0509735957 \text{ mol}$ <p>faster</p> $\frac{5.00g}{98.09} \times 6.02 \times 10^{23} = 3.07 \times 10^{22}$	$0.0509735957 \text{ mol} \times 6.02 \times 10^{23} = 3.07 \times 10^{22} \text{ molecule}$

$$\begin{array}{r} 1.01 \\ 1.01 \\ 32.07 \\ 16.00 \\ 16.00 \\ 16.00 \\ 16.00 \end{array}$$

$$4.3 \text{ mol/L} \times 0.75 \text{ L} = 3.2 \text{ mol}$$

3. Finding the number of atoms in a molecule (atoms)

<p>1- Use mole formula: $n=m/m_m$</p> <p>2- Use molecule ratio (6.02×10^{23})</p> <p>3- Multiply answer by number of atoms molecule has</p> <p>How many oxygen atoms are in 250 g of $CaCO_3$?</p>	<p>$\times 3$</p>
$n = \frac{m}{m_m} = \frac{250g}{100.09g/mol} = 2.497752023 \text{ mol}$ $2.497752023 \text{ mol} \times 6.02 \times 10^{23} \times 3 \text{ atoms of O} = 4.5 \times 10^{24} \text{ atoms of O}$	$2.497752023 \text{ mol} \times 6.02 \times 10^{23} \times 3 \text{ atoms of O} = 4.5 \times 10^{24} \text{ atoms of O}$

$$\begin{array}{r} 40.08 \\ 12.01 \\ 16.00 \\ 16.00 \\ 16.00 \end{array}$$

4. Finding the volume (L)

- 1- Use mole formula: $n=m/m_m$
- 2- Use answer in mol/L ratio

What volume of a 1.5 M solution of NaCl contains 6.0 g of solute?

$22.99 + 35.45 = 58.44$

$$n = \frac{m}{m_m} = \frac{6.0g}{58.44g/mol} = 0.1026694045mol$$

$$n = c \times v$$

$$v = \frac{n}{c} = \frac{0.1026694045mol}{1.5mol/L} = 0.068L$$

5. Finding the molarity (mol/L)

- 1- Use mole formula: $n=m/m_m$
- 2- Divide answer by the volume

- 1- Set up ratio to find grams
- 2- Use mole formula: $n=m/m_m$

Calculate the molarity of a solution by dissolving 24 g of NaOH in enough water to make 1.75 L of solution.

There are 600 g of fructose $C_6H_{12}O_6$ in a Coke can. What is the molar concentration of the drink?

$$\begin{array}{r} 22.99 \\ + 16.00 \\ + 1.01 \\ \hline 40.0 \end{array}$$

$$n = \frac{m}{m_m} = \frac{24g}{40g/mol} = 0.6mol$$

$$c = \frac{n}{v} = \frac{0.6mol}{1.75L}$$

$$= 0.34 mol/L$$

$$\frac{600g}{180.18g/mol} = 3.333333333$$

There are 600 g of fructose $C_6H_{12}O_6$ in a Coke can. What is the molar concentration of the drink?

$$n = \frac{m}{m_m} = \frac{600g}{180.18g/mol} = 3.333333333$$

$$\frac{3.333333333 mol}{0.4L} = \frac{x}{1L}$$

$$x = 8.3 = 8 mol/L$$

- 12.01 (6)
- 1.01 (12)
- 16.00 (6)

6. Finding mass (g) and process

- 1- Use mass formula $m = n \times mm$
- 2- Find mole with ratio mol/L

5 step process

How many grams of CaCO_3 are in 250 ml of a 0.75 M solution?

How would you prepare 250 mL of a 0.75 M solution of CaCO_3 ?

$m = n \times mm$

$n = C \times V$

$0.75 \text{ mol/L} \times 0.25 \text{ L} = 0.1875 \text{ mol}$

$m = n \times mm$
 $0.1875 \text{ mol} \times 100.09 \text{ g/mol} = 18.79 \text{ g} \approx 19 \text{ g}$

- ① Weigh 19g of CaCO_3 on a balance
- ② Put solute in 250ml flask
- ③ add a bit of water + swirl
- ④ add water to 250ml line
- ⑤ check meniscus

7. Comparing concentrations g/L or Mol/L

- Unit- g/L
- 1- Use mass formula: $m = n \times mm$
 - 2- Divide answer by volume

- Unit- mol/L
- 1- Use mole formula: $n = m/mm$
 - 2- Divide answer by volume

3.0 moles of KBr in 2.5 litres of solution

3.0 g of KBr in 2.5 litres of solution

OR

OR

1.5 moles of NaOH in 400.0 mL of solution

1.5 g of NaOH in 400.0 mL of solution

$m = n \times mm$
 $3.0 \text{ mol} \times 119.00 \text{ g/mol} = 357 \text{ g}$

$n = \frac{m}{mm}$
 $\frac{3.0 \text{ g}}{119.00 \text{ g/mol}} = 0.025210084 \text{ mol}$

$C = \frac{m}{V}$
 $\frac{357 \text{ g}}{2.5 \text{ L}} = 142.8 \text{ g/L}$

$C = \frac{n}{V}$
 $\frac{0.025210084 \text{ mol}}{2.5 \text{ L}} = 0.010 \text{ mol/L}$

$m = n \times mm$
 $1.5 \text{ mol} \times 40.00 \text{ g/mol} = 60 \text{ g}$

$n = \frac{m}{mm}$
 $\frac{1.5 \text{ g}}{40 \text{ g/mol}} = 0.0375 \text{ mol}$

$C = \frac{m}{V}$
 $\frac{60 \text{ g}}{0.4 \text{ L}} = 150 \text{ g/L}$

$C = \frac{n}{V}$
 $\frac{0.0375 \text{ mol}}{0.4 \text{ L}} = 0.094 \text{ mol/L}$
